DETAILED ACTION

Priority

1. Acknowledgment is made of applicant's claim for foreign priority under 35 U.S.C. 119(a)-(d). The certified copy has been filed in parent Application No. 10/724,317, filed on 11/26/03. ***Drawings***

2. Figures 17-25 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Specification

3. Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

4. The abstract of the disclosure is objected to because of inclusion of legal phraseology such as "said". Correction is required. See MPEP § 608.01(b).
5. The lengthy specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.
6. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

The following title is suggested: "Moving Picture Coding and Decoding Method and Program for Selectively Displaying a Filtered and Decoded Picture."

Claim Rejections - 35 USC § 102

7. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

8. Claims 18-25 are rejected under 35 U.S.C. 102(a) as being anticipated by Applicant's admitted prior art (AAPA).

AAPA, in Figures 17-25, discloses the same picture encoding and decoding method for encoding and decoding a bitstream as specified in claims 18-25 of the present invention, comprising outputting a decoded picture 610 by decoding a coded picture 613 included in the bitstream; outputting a filtered picture by performing filtering process 612 on the decoded picture; storing the filtered picture as a reference picture

into a memory 601 in the case where the decoded picture is a reference picture; extracting, from the bitstream, filtering application information 613 indicating whether the filtered picture or the decoded picture prior to the filtering process 612 is preferred to be outputted for a display process; and selectively outputting the filtered picture 512 or the decoded picture 511 prior to the filtering process for the display process based on the extracted filtering application information (e.g. selection information).

With respect to claims 19-25, AAPA also discloses the filtering application information indicates, only for a picture (e.g. Intra or Inter) specified by the filtering application information, whether the filtered picture or the decoded picture prior to the filtering process is to be selectively outputted for the display process; the filtering application information indicates, for a predetermined picture (e.g. Intra) and each picture following the predetermined picture (e.g. Inter), that the decoded picture 511 prior to the filtering process 512 or the filtered picture 512 is preferred to be outputted for the display process (e.g. Fig. 17).
